

BMW Digital Key

Compatibility Information

Countries – Models – Devices

04/03/2025

Depending on the country, model and equipment of your BMW and your smartphone or smartwatch model, you can lock or unlock and start your BMW with the BMW Digital Key or the BMW Digital Key Plus.

With the **BMW Digital Key Plus**, your BMW unlocks automatically when you approach it. Additional comfort functions are available on your smartphone or smartwatch when you are close to the vehicle. To start the engine, your mobile device just needs to be in the passenger area. Data is transmitted via "ultra-wideband" (UWB) and Bluetooth®.

With the **BMW Digital Key**, you have to hold your smartphone or smartwatch against the door handle to unlock the vehicle and place it in the smartphone tray to start the engine. Data is transmitted via the "Near Field Communication" (NFC) mobile standard.

If your country or mobile device does not support data transfer via "ultra-wideband" (UWB), the BMW Digital Key Plus uses the "Near Field Communication" (NFC) mobile standard.

Please check on the following pages whether your country, your BMW model, and your mobile device are compatible with the BMW Digital Key Plus or the BMW Digital Key.

In which countries can I use the BMW Digital Key?

The **BMW Digital Key Plus** is currently available on compatible devices from Apple, Samsung, Google, and Motorola in the following countries:
